- You

# Curriculum

# Curriculum

- What does it take? (Scope)

# Curriculum

- What does it take? (Scope)
- Best Practices

# Curriculum

- What does it take? (Scope)
- Best Practices
- A design process, and how to apply it to the web

# Curriculum

- What does it take? (Scope)
- Best Practices
- A design process, and how to apply it to the web
- User-centered Design for usability and accessibility

# Themes

# Themes

- Design process and iteration

# Themes

- Design process and iteration
- What to do vs. How to do it

# Themes

- Design process and iteration
- What to do vs. How to do it
- Maintainability

# Expectations

# Expectations

- Curiosity and Craftsmanship

# Expectations

- Curiosity and Craftsmanship
- Attendance

# Expectations

- Curiosity and Craftsmanship
- Attendance
- Homework

# Goals

Tuesday, January 22, 13

You won't be a web developer after this  
...and you might decide its all not worth the trouble...  
but you will get to know the scope of whats involved

# Goals

- Introduce you to HTML syntax

# Goals

- Introduce you to HTML syntax
- Introduce you to CSS syntax

# Goals

- Introduce you to HTML syntax
- Introduce you to CSS syntax
- Get you the vocabulary you need to Google your way to glory...

# Goals

- Introduce you to HTML syntax
- Introduce you to CSS syntax
- Get you the vocabulary you need to Google your way to glory...
- ...and understand what you find.

# What's a Website, Really?

Tuesday, January 22, 13

You know how to interact with a website, Google, Facebook, etc.

# ~~Whats a Website, Really?~~

## What happens when you request a website?

Tuesday, January 22, 13

- Its fairly complicated, but the short of it is, your computer asks another computer over the internet for whatever is at that address.
- The computer at the other end of the address checks if it has something at that address, and then sends it back if it does.
- It could be any kind of file, but most often its a text file in a pre-defined format.

# How is a website made?

# HyperText Markup Language

## (HTML)

# HyperText Markup Language

## (HTML)

Its just a plain text file in some fancy format.

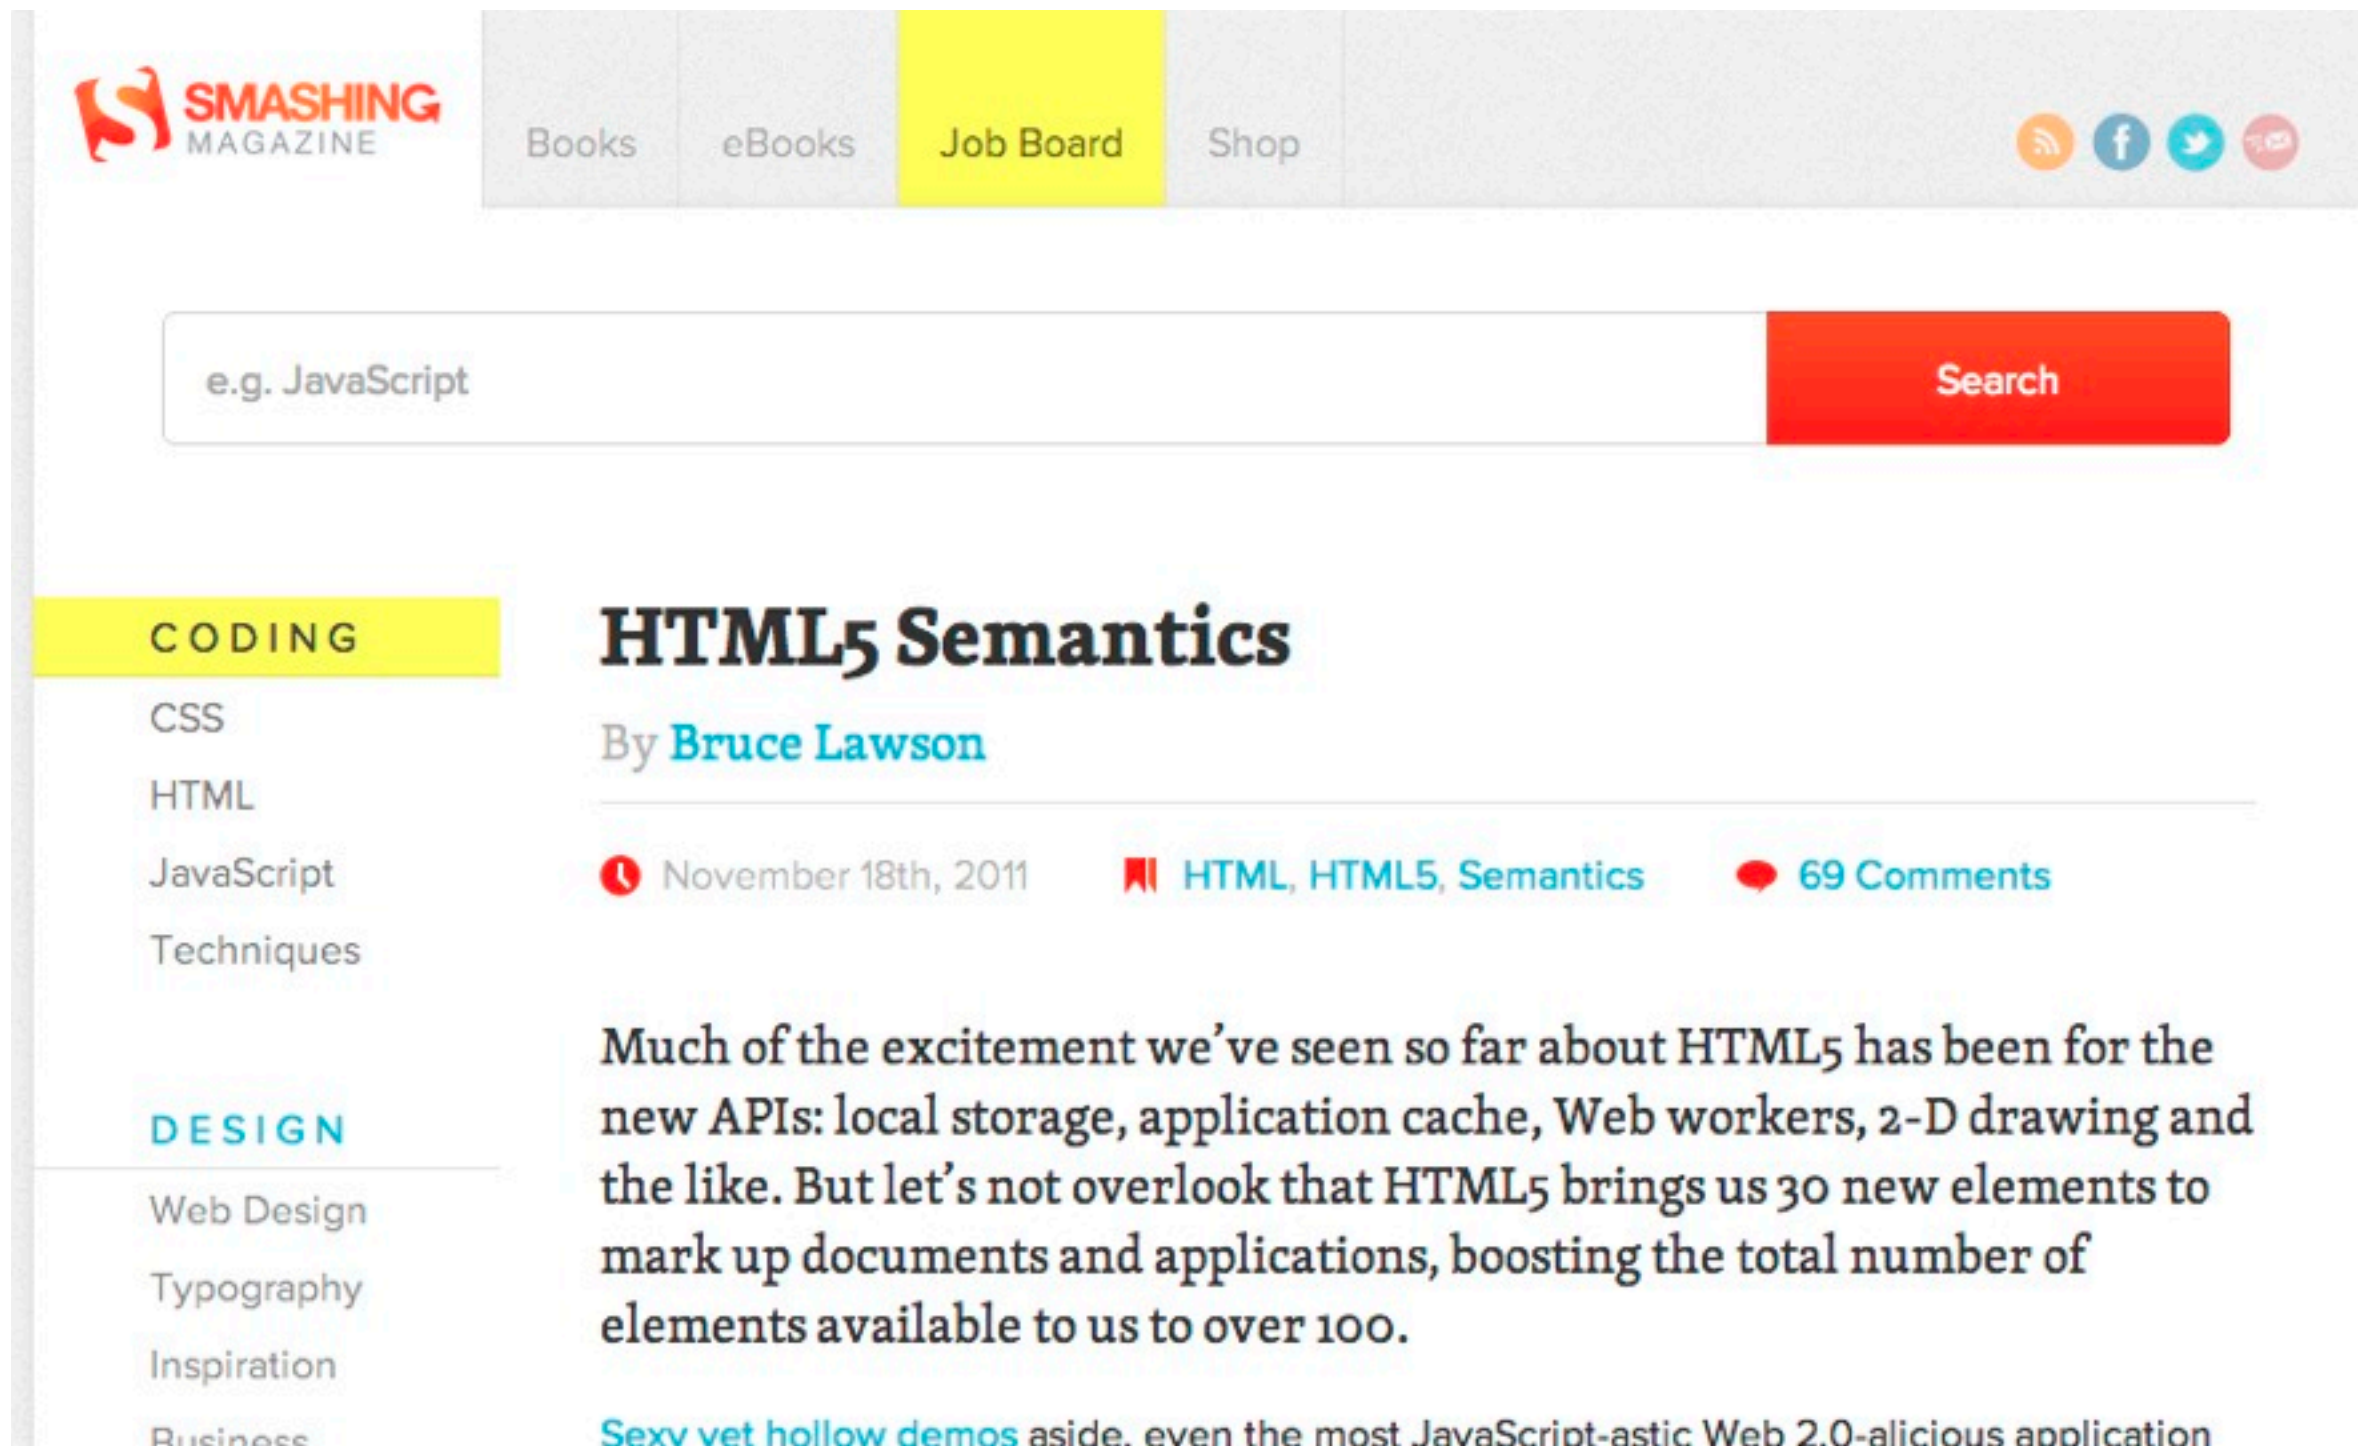

# HyperText Markup Language

## (HTML)

Its just a plain text file in some fancy format.

Instead of .txt, its extension is .html.

# You See This

Tuesday, January 22, 13

- What you see in a browser is “rendered.” Its an interpretation of the HTML

# Chrome Actually Got This

```
<!DOCTYPE html>
<html class="no-js" dir="ltr" lang="en-US">
  <meta name="viewport" content="width=device-width, initial-scale=1.0" />

```

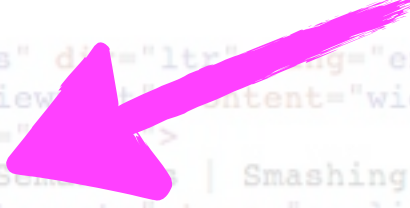

Tuesday, January 22, 13

- Your browser (Chrome, Firefox, or Safari) actually downloaded a text file in HTML format
- Don't be afraid, it's all fairly simple if you understand the parts.
- This text file is what the website maker (the coder or 'web developer') typed in

# Static vs. Dynamic Websites

Tuesday, January 22, 13

- Some websites don't change on their own, these are static sites
  - A business website is static: the content doesn't change unless someone does it manually
- A dynamic website is automatically generated by computer, so it can change on its own based on conditions (who is logged in, time of day, etc.)
  - Facebook and google are dynamic websites
- The building blocks of static and dynamic websites are the same, but you need to understand a static one before you can make a dynamic one

# Anatomy of a Webpage

Tuesday, January 22, 13

Just like humans, except with a doctype.

There's important information in your head people can't see

There's your body that people can see

# Anatomy of a Webpage

- A doctype - What version of HTML are you using?

# Anatomy of a Webpage

- A doctype - What version of HTML are you using?
- HTML

# Anatomy of a Webpage

- A doctype - What version of HTML are you using?
- HTML
  - A head - What information should be loaded first, that the user does not see?

# Anatomy of a Webpage

- A doctype - What version of HTML are you using?
- HTML
  - A head - What information should be loaded first, that the user does not see?
  - A body - What will the user see in their browser?

```
<!doctype html>
<html>
  <head>
    <title>Only shows up in the title bar</title>
  </head>

  <body>
    You can see this text.
  </body>
</html>
```

```
<!doctype html>
```

## DocType

```
<html>
```

```
  <head>
```

```
    <title>Only shows up in the title bar</title>
```

```
  </head>
```

```
  <body>
```

```
    You can see this text.
```

```
  </body>
```

```
</html>
```

```
<!doctype html>
```

```
<html>
```

```
  <head>
```

```
    <title>Only shows up in the title bar</title>
```

```
  </head>
```

```
  <body>
```

```
    You can see this text.
```

```
  </body>
```

```
</html>
```

**All the HTML**

```
<!doctype html>
<html>
  <head>
    <title>This text shows up in the menu bar</title>
  </head>

  <body>
    You can see this text.
  </body>
</html>
```

```
<!doctype html>  
<html>
```

head

```
  <head>  
    <title>This text shows up in the menu bar</title>  
  </head>
```

```
  <body>  
    You can see this text.  
  </body>  
</html>
```

```
<!doctype html>  
<html>
```

**head**

```
<head>  
  <title>This text shows up in the menu bar</title>  
</head>
```

```
<body>  
  You can see this text.  
</body>
```

**body**

```
</html>
```

# Syntax

...is important.

Tuesday, January 22, 13

- Syntax in english give us additional information about how to interpret the words and sentences
  - We have commas, periods, capitalize the first letter.
- The syntax is not the content, but its important to the interpretation
- A computer can figure out what you mean based on context, so the syntax is very defined and specific

# <tagsAreInAngleBrackets>

Tuesday, January 22, 13

- Tags create elements
- I'm saying 'elements' and not 'things,' 'stuff,' 'items,' because that's the official term
- Elements are what you will see people call them

# <tagsAreInAngleBrackets>

They create elements: individual components of a webpage

Tuesday, January 22, 13

- Tags create elements
- I'm saying 'elements' and not 'things,' 'stuff,' 'items,' because that's the official term
- Elements are what you will see people call them

<chair legs="4">

<chair legs="4" />

# Its a (Family) Tree Structure!

Tuesday, January 22, 13

- Some elements can contain others and some can't.
- Elements that can contain others must have a matching end tag
- You should be familiar with this view, because thats how you have to think about HTML
- They are like russian dolls

```
<!doctype html>
<html>
  <head>
    <meta charset="utf-8">
    <title>This is the title of the page</title>
  </head>

  <body>
    <div id="header">
      <h1>Some Title</h1>
      <ul>
        <li>1</li>
        <li>2</li>
        <li>3</li>
      </ul>
    </div>

    <div id="main-content">
      <a href="http://google.com">Click here to go to google</a>
      <p>
        Some paragraph text. This is <em>emphasized</em>, and here comes a linked image:
        <a href="http://google.com" title=""></a>
      </p>
    </div>
  </body>
</html>
```

# You Can't Just Make Up Tags

There is a list. You can look it up.

# Common Elements in the <body>

- Header tags (h1-h6) - `<h1>Title here</h1>`
- Paragraph tags - `<p>Body text here</p>`
- Lists (ul/ol) - `<ul><li>List item</li></ul>`
- Strong - `<strong>Bold me!</strong>`
- Emphasis - `<em>Slant me!</em>`
- Anchors (links) - `<a>link text</a>`
- Images - `<img>`
- Generic elements (span and div)
- Forms and tables, etc.

# Let's Mark Up This Document

## Report: Unemployment High Because People Keep Blowing Their Job Interviews

WASHINGTON—With unemployment at its highest level in decades, the [U.S. Department of Labor](#) issued a report Tuesday suggesting the crisis is primarily the result of millions of

Americans just completely blowing their job interviews.

### According to the findings:

- Seven out of 10 Americans could have landed their dream job last month if they had known where they see themselves in five years.
- The number of unemployed could be reduced from **14.6 million to 5 million** if:
  1. everyone simply greeted potential employers with *firmer* handshakes
  2. maintained eye contact
  3. stopped fiddling with their hair and face so much.

This article was brought to you by the Onion

# Common Elements in the <head>

- meta - <meta charset="utf-8">
- link (stylesheets)
- script (javascript)

# HTML is About Content

Tuesday, January 22, 13

It describes your content.

Its some text or other elements wrapped in a tag

# HTML is About Content

The browser shows this content in  
certain ways by default.

# CSS is About Style

# Cascading Style Sheets

(CSS)

# Cascading Style Sheets

(CSS)

Another plain text file in some fancy format.

# Cascading Style Sheets

(CSS)

Another plain text file in some fancy format.

The extension is generally .css

# Anatomy of a CSS Rule

# #Ids and .Classes

## Declaring a CSS Rule for a **Class** Attribute

the XHTML

```
<a class="pdf" href="brochure.pdf">Brochure</a>
```

the CSS

```
.pdf {background: url(images/pdf.gif) no-repeat left 50%;}
```

use a **period** when writing a rule for a **class**

## Declaring a CSS Rule for an **Id** Attribute

the XHTML

```
<div id="wrapper">Main Content</div>
```

the CSS

```
#wrapper {width: 750px; margin: 0 auto;}
```

use a **pound sign** when writing a rule for a **id**

# Validation and Debugging

Tuesday, January 22, 13

View > Developer > Developer Tools in Chrome  
or right click and inspect element

# Validation and Debugging

(The developer tools are your friend)

# Common “Gotchas”

- Absolute vs. relative urls

[http://www.webdevelopersnotes.com/design/relative\\_and\\_absolute\\_urls.php3](http://www.webdevelopersnotes.com/design/relative_and_absolute_urls.php3)

- Is your element inline or block? (look that up)
- Improper nesting (what is inside what? validate!)
- Spelling (validate!)

# Publishing Your Website

Tuesday, January 22, 13

You need a 'host' (a computer where to put your website, connected to the internet)

You need a domain name (an address that points to that computer)

# More Resources

- Learn about tags
